```
 1   1. Docker Compose 설치
 2      $ sudo curl -L
        "https://github.com/docker/compose/releases/download/1.29.2/docker-compose-$(uname
        -s)-$(uname -m)" -o /usr/local/bin/docker-compose
 3      $ sudo chmod +x /usr/local/bin/docker-compose
 4
 5
 6   2. 설치 확인
 7      $ docker-compose version
 8      docker-compose version 1.29.2, build 5becea4c
 9      docker-py version: 5.0.0
10      CPython version: 3.7.10
11      OpenSSL version: OpenSSL 1.1.0l  10 Sep 2019
12
13
14   3. 명령어 축약하기
15      -docker-compose가 너무 길어서 귀찮을 때.
16      # ~/.bashrc 파일 가장 아랫 부분에 다음 내용을 추가
17         $ alias dco='docker-compose'
18      $ source ~/.bashrc
19      $ dco
```
